SUMMARY

Product-focused Systems Architect and Product Owner proxy with 6+ years of experience delivering regulated healthcare software. Experienced translating ambiguous clinical and business needs into product scope, user stories, acceptance criteria, roadmap tradeoffs, and release-ready execution plans. Experienced in customer discovery, Agile delivery, global regulatory launches, and cross-functional leadership, with hands-on technical depth across AI and software development.

EXPERIENCE

Zimmer Biomet, Remote, Canada May 2021 - Present

Systems Architect / Product Owner proxy

- Operate as Product Owner proxy for a global surgical planning software platform used in **14K+ annual surgical cases worldwide**, translating clinical workflows, commercial priorities, regulatory expectations, and engineering constraints into release-ready product scope.
- Owned feature definition and backlog readiness for shoulder planning workflows across **4+ major product releases**, including scapula planning, humerus planning, segmentation improvements, new product introduction, and platform readiness.
- Led humerus planning from discovery through release readiness, defining **13 anatomical landmark requirements**, aligning clinical and engineering stakeholders, and converting an ambiguous workflow into build-ready requirements.
- Conducted **surgeon interviews** and clinical workflow discussions during lab sessions and surgeon calls to uncover usability pain points, validate planning assumptions, and translate user feedback into product improvements.
- Influenced roadmap prioritization during a critical **three-month release window** by assessing customer impact, competitive positioning, engineering capacity, implementation effort, and platform support timelines.
- Drove cross-functional alignment across engineering, quality, regulatory, and product teams for a Special 510(k) submission that achieved FDA clearance in **under four months** with no FDA questions.

Savormetrics, Mississauga, ON Jan 2020 - Aug 2020

Product Intern

- Owned end-to-end product development for a new feature, managing research, sourcing, design, integration, and testing to complete implementation within a **\$50,000 budget**.
- Collaborated with engineering and marketing teams to drive a successful launch, resulting in the on-time release of **3 new product units**.
- Developed product roadmaps and delivery plans aligned with business objectives, customer needs, and technical constraints for new product initiatives.

Sunnybrook Research Institute, Toronto, ON May 2019 - Aug 2019

Software Developer Intern

- Spearheaded development of a C++ application, **reducing input delay by 60%** and improving user interaction.
- Enhanced tracking algorithm accuracy by **20%** and presented findings to research stakeholders and lab leadership.

Intellijoint Surgical, Waterloo, ON Jan 2018 - Apr 2018

Software Developer Intern

- Redesigned a web application for orthopedic surgeons using JavaScript, HTML, CSS, and Django to **increase beta product interaction by 400%**.
- Optimized application performance, reducing software cycle time by up to **8 seconds** for end users.
- Identified and implemented a 3D modeling workflow that generated over **\$15,000 in savings**.

PROJECTS

RetroAI, Agile Retrospective Generator

[Retroai-kappa.vercel.app](#) May 2025 - Present

- Identified workflow inefficiencies in retrospective planning and built a product that reduced preparation time from hours to minutes.
- Defined product vision, feature roadmap, user experience, and go-to-market approach while leading development.
- Designed customizable layouts, themed icebreakers, activity formats, and export workflows optimized for collaboration.
- Generated **30+ retrospective boards** across multiple agile teams during early testing.

DemonKeying, Competitive Typing Game

[demonkeying.com](#) Jan 2026 - Present

- Built, launched, and iterated on a consumer web product, defining core gameplay loops, engagement mechanics, and feature roadmap.
- Built live score tracking, play count monitoring, and global leaderboard functionality.
- Managed deployment pipeline including custom domain setup, backend hosting, API integration, and debugging.

Valorant AI Aim Agent, Coaching Agent

Computer Vision, ML Oct 2025 - Jan 2026

- Built a real-time gameplay pipeline using Python, OpenCV, screen capture tooling, and voice feedback to detect aim posture during live play.
- Developed an AI-powered assistant using **MobileNetV2** that provides contextual gameplay feedback.
- Collected and labeled gameplay frames, then iterated through testing sessions to refine feedback quality and reduce false positives.

SKILLS

Product: Product Discovery, User Research, Roadmapping, Backlog Prioritization, PRDs, Acceptance Criteria, User Stories, Stakeholder Management, Agile/Scrum, Sprint Planning, PI Planning, Jira, Figma

Technical: Python, React, Next.js, TypeScript, C++, SQL, APIs, HTML/CSS, OpenCV

AI Tools: ChatGPT, Codex, Claude, Rapid Prototyping, AI-assisted Development, Prompt Engineering, Data Labeling

EDUCATION

University of Waterloo, Waterloo, ON

B.A.Sc. Biomedical Engineering, option in Management Sciences. GPA 3.8.

Certifications

Professional Engineer (P.Eng.), Professional Engineers Ontario (PEO)
